Psycopg: A New DA between Python
and PostgreSQL (71)
Federico Di Gregorio

Tips and Tricks

Upgrading KDE2 to KDE3 from CVS
Anne-Marie Mahfouf (75)

Free Book Review

How to Think Like a Computer Scientist
Hong Feng (79)

All editing was done by GNU Emacs 21 — the greatest text editing tool originally invented by Richard M. Stallman; We encoded the source files into XML files as per TEI, and parsed into .tex file with Scheme script developed by Hong Feng; The final typesetting is formatted by Plain T_EX and (L^AT_EX 2_ε), the professional typesetting system originally invented by Prof. Donald E. Knuth.

The cover oil painting is drawn by Elena Omelyanenko, and the image is processed by Annie Zhang using GIMP on GNU/Linux. We are glad to sell the painting, so that we could have more funds to support **MNM Project** (For more details about it, please visit <http://www.rons.net.cn>). Please contact fred@mail.rons.net.cn for purchasing it.
